Mineral oils, derived from refined crude, are often less expensive but may require additives to match synthetic performance.

Typical composition includes:

- Synthetic bases (e.g., PAOs):** 70-80%
- Additive packages:** 20-30%

Additives

Additives are crucial in defining the performance profile of T68 Oil. They impart anti-wear, anti-oxidation, anti-corrosion, and extreme pressure (EP) qualities.

Common additives include:

- Zinc Dialkyl Dithiophosphates (ZDDP):** Anti-wear and anti-oxidation
- Detergents and dispersants:** Keep surfaces clean and prevent sludge formation
- Viscosity modifiers:** Maintain consistent viscosity across temperature ranges
- Anti-oxidants:** Minimize oxidation during prolonged use
- Corrosion inhibitors:** Protect metal surfaces from rust

Typical specifications:

- Viscosity at 40°C:** 68 cSt (hence the "T68" designation)
- Flash point:** >200°C
- Pour point:** Below -30°C
- Acid number:** Low, indicating minimal acidity

Performance Characteristics

T68 Oil exhibits excellent thermal stability, oxidation resistance, and low volatility. These properties ensure consistent lubrication even under high-temperature conditions. Its high viscosity index (VI) allows for stable film formation, reducing metal-to-metal contact and wear.

Key performance metrics include:

- High load-carrying capacity
- Outstanding shear stability
- Effective film strength at elevated temperatures
- Compatibility with sealing materials and metals

Applications of Data Sheet T68 Oil
