Analysis: Recognize the percentage as a fraction: $15\% = 0.15$

Calculate: $0.15 \times 200 = 30$ employees

Key Strategy: Convert percentages to decimal form for straightforward multiplication. Cross-check by estimating: 10% of 200 is 20, so 15% should be slightly more than 20, which aligns with 30.

Work and Rate Problems

Sample Problem: A worker can complete a task in 8 hours. Another worker is twice as fast. How long will it take both working together to complete the task?

Analysis: First worker's rate: 1 task per 8 hours $\Rightarrow 1/8$ per hour

Second worker's rate: twice as fast $\Rightarrow 2/8 = 1/4$ per hour

Combined rate: $1/8 + 1/4 = 1/8 + 2/8 = 3/8$ per hour

Time to complete: $1 / (3/8) = 8/3 \Rightarrow 2.67$ hours

Key Strategy: Find individual rates, sum them, then invert to find time. Always express rates as fractions or decimals for clarity.

Data Interpretation and Graph Analysis

Sample Problem: A bar graph shows sales of five products over a quarter. If Product A's sales are 40% higher than Product B's, and Product B's sales are 200 units, what are Product A's sales?

Analysis: Product A's sales: $200 + (40\% \text{ of } 200) = 200 + 80 = 280$ units

Key Strategy: Convert percentage increase into a decimal and multiply. Pay attention to the relationship between data points.
