Sample Questions and Answer Key for Consumer Math Unit 10

Question 1: Calculating Simple Interest

Problem: If you deposit \$2,000 into a savings account with an annual simple interest rate of 3%, how much interest will you earn after 4 years?

Solution: Identify the variables: Principal (P) = \$2000, Rate (r) = 3% = 0.03, Time (t) = 4 years. Use the simple interest formula: $I = P \times r \times t$. Calculate: $I = 2000 \times 0.03 \times 4 = \240 . **Answer:** You will earn \$240 in interest after 4 years.

Question 2: Loan Payment Calculation

Problem: A person takes out a loan of \$10,000 at an annual interest rate of 6%, to be paid over 5 years with monthly payments. What is the monthly payment? (Use the loan amortization formula)

Solution: Identify variables: Principal (P) = \$10,000, Annual interest rate (r) = 6% = 0.06, Number of years (n) = 5, Number of payments (N) = $5 \times 12 = 60$, Monthly interest rate (i) = $0.06 / 12 = 0.005$. Use the loan amortization formula: $\text{Payment} = P \times [i / (1 - (1 + i)^{-N})]$. Calculate: $(1 + i)^{-N} = (1 + 0.005)^{-60} \approx 0.7401$. Denominator: $1 - 0.7401 = 0.2599$. $\text{Payment} = 10,000 \times (0.005 / 0.2599) \approx 10,000 \times 0.01923 \approx \192.30 . **Answer:** The monthly payment is approximately \$192.30.

Question 3: Credit Card Interest Calculation

Problem: You have a credit card balance of \$1,200 with an annual interest rate of 18%. If you only make the minimum payment of \$36 each month, how long will it take to pay off the balance assuming no new charges are made?

Solution: This problem involves understanding how credit card interest accrues and the impact of minimum payments. While exact calculation requires iterative or financial calculator use, an approximate estimate can be made. Identify variables: Balance =

\$1,200 Monthly interest rate = $18\% / 12 = 1.5\% = 0.015$ Minimum payment = \$36 Estimate the time to pay off: Since the payments are close to the interest accrued monthly, the balance decreases slowly. Using approximate formulas or financial calculator, it would take around 50-55 months to pay off the debt under these conditions. Answer: It will take approximately 50 to 55 months to pay off the credit card balance making only the minimum payments.
